Project 2 - Milestone 4

This time I made a step counter app. It was hard for me to make the step detector kind of things work on well. The part always bother me is that I never make second version of the project, which will be really helpful for me to find out where the code cause the bugs. The app works for most of time, but sometime will accidentally crashed by some unknown reasons (I'm trying to figure it out after our final.) However, this time I spend most of time working on UI staff to make the action and graph look smooth and tidy, and I achieved that goal which was great. In the future, I will try to solve all the bugs and make it run well.
